

100 SERIES

Affordable, Quality Windows

Environmentally Responsible

The long-lasting* design helps preserve natural resources. Reclaimed materials are used in the glass. And the patented Fibrex® composite material used in the frame and sash contains 40% pre-consumer reclaimed wood fiber.

Durability

Twice as rigid as vinyl, Fibrex material combines the strength of wood with vinyl's low maintenance and cost. 100 Series windows won't flake, rust, blister, peel, pit or corrode*.

Incredible Value

The moderate price combined with the performance and long-lasting* quality make 100 Series windows an excellent buy. Energy-saving features like optional SmartSun™ glass add even more long-term value.

Made For The West

Using input from hundreds of builders, architects and homeowners, 100 Series windows were developed with the performance requirements and optional colors and configurations best suited for the region. From white interiors to darker exterior colors like Terratone® and Cocoa Bean, 100 Series offers colors that most vinyl windows can't. The design meets ENERGY STAR® qualifications, plus Fibrex material is unaffected by sea breezes and salty air.

features & options

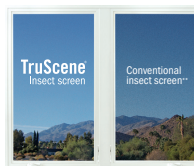

With standard Low-E glass and an energy-efficient design, these windows help save money on utility bills and help protect the environment. Optional SmartSun™ glass blocks the sun's heat but not the light for added efficiency and comfort.

Enjoy the design flexibility to fit almost any opening with single-hung, gliding, casement, awning and picture windows in a wide variety of shapes, sizes, colors and combinations.

A wide variety of grille patterns are available. Optional Andersen® Finelight™ grilles-between-the-glass make the windows both beautiful and easy to clean.

Optional TruScene® insect screens feature micro-fine mesh that lets more light and fresh air into your home, yet keeps even the smallest insects out.

** Conventional Andersen® insect screen
